Dear Lederberg,

It took me more than 6 months to answer your letter of April 12. A lot of work and a trip to Brazil - giving a course in Rio, and lecturing around the country. But I did not forget your inquiry about Lisbonne and Ferrière's lysogenic strain. I recently got it with the Shiga indicator strain, and, if you still are interested in receiving them, I'll send them right away. Please, tell me.

Lwoff is doing very nice work on lysogenesis. Silvestri, in Italy, recently repeated, with N-mustard, the mutation that I produced in T2 by UV-raying the infected bacteria.

Hoping that everything is all right with you

Sincerely

Raymond Latarjet
