Bacteriology Dept.
Queen's University
Kingston Aug 1, 1952.

Dear Dr. Lederberg, -

The above address is the only one which I can give you and it is good only for a few months. We are now in a sublet waiting to get a business deal completed so that we can move into a new house on Aug 15.

We've been so busy travelling around and house hunting that I haven't been getting much work done at the lab.

Max and I have been expecting you and Mrs. Lederberg to come by this way on your trip around the end of August. For the first few weeks in our new house we will be "camping" until we can get some furniture, but we do have beds and we can grill steaks and roast corn in the back yard.

Kingston is an interesting historic place since it was one of the first military establishments in Canada and old Fort Henry here is quite a show place. There are also daily motor launch

trips through the Thousand Islands. So plan to stay overnight with us and see the country around Kingston.

Please thank Larry for the snaps. Dorothy was going to send the WG10 and WG15 mutants. During the fall I would also like to have E coli strains 58-161 and W1177 for a demonstration of crossing, - if and when it is most convenient for you to send them.

Our regards to Phyllis, Dorothy, Larry and the others. Please don't let this moving business interfere with your plans if you can come to Kingston. We're getting quite used to the moving ourselves and we'll do our best to look after you. Just phone the lab 4384 or if after 5 p.m. phone 2-4311 or drop us a line.

Sincerely,

Bill Thomson.

P.S. Your letter arrived before I had posted this. Will be glad to get the stants and hope to see you

Bill T.
