ROTMAN

Dear Josh,

The paper looks remarkably good except for a few factors.

1. Numerous errors of sp. & punct were corrected on the orig. M.S. which I sent back to Genetics.

2. the grammar etc goes to pieces completely when he reaches the discussion.

3. the existence of inhibited enzyme in the cold extract appears to refute his main hypothesis - the formulation of the latter is indeed vague. Just what is permease, whether protein or phenomenon is not clear. What is its role? How do the arabinosides escape its influence?

Some specific questions are found on the other side of this.

Your secretary will assemble & carry out corrections & send paper to J. Barty when you write her.

I hope you all having an enjoyable & profitable trip

Hank. (Barty 9/57)
