July 28th 1934

A batch of cultures and phages have just arrived from Uetake, mostly groups E. E2.

Two of the phage vials were empty on arrival, Uetake's 84P and EII-3P, two others are rather doubtful as the vials were open but not empty (EII-1P & EII-2P). The two remaining phages & the cultures look O.K. I'll sub the latter into Stakes.

I thought you might wish to mention the receipt of the cultures when you write to Uetake.

Alec
