Hadley - "Dissociation"

Thank you for your mes of 10/26, re bacterial growth rates.

A propos Hadley - no I don't think we've discussed it. But I've always thought his ideas of cyclogeny etc compounded the problem! As did W. Braun.

Have we been uncharitable?

I've re-read Cole + Wright (U. Wis!) many times, and am ever more impressed by their clarity.

L. J. Cole was among the very few geneticists who took any note of bacteria at all, so soon after the 1900 rediscovery of Mendel, and Johannsen 1909.
