(NIGMS 3/73 &

Hans -

I'm sorry I've been in the midst of preparing for a major site visit* today and could not turn away to respond to your request for a precis of my talk Wednesday.

My remarks will follow the lines indicated in the reprint attached, but will also enlarge on the interplay of basic research and social policy, areas like

pesticides and other environmental hazards; drug safety
nuclear energy
biological warfare - intl. controls
abortion
malnutrition and early critical periods
genetic disease and prevention.
limits of biological exploitation for man.

I will leave to Anderson and Thomas the development of specific therapeutic and diagnostic aids.

Josh.
