New York, December 31, 1951.

Dear Dr Lederberg.

A few days ago I was with Dr Rakieten in his Lab and he gave me to read a letter of your that thrill me. Was about a transformation by washing S. typhi and S. typhimur. I worked in the problem of bacterial transformation in the Salmonella group for about 10 months with Dr P.R. Edwards and I had not success. I am very interested to receive more news about your transformation and I should like to hear about here or in my country. I came with a Guggenheim fellowship and I return to my country (Argentina) on January 11th.

I look forward for a reprint or any complementary note about the problem as soon as you think is ready.

My address in Argentina is:

Dr. Figueroa Alcorta 5950
Buenos Aires.
Argentina.

Be sure I shall appreciate very much all news that you can give me about the problem.

Thank you very much.

Sincerely yours Osvaldo A. Peso
