Sept. 28, 1952

Dear Joshua —

François Jacob, in Lwoff's service at the Institut Pasteur, would like cultures of the P. fluorescens mutants that you made. I lost my transfers on my travels, so could you send him some lyophilized tubes? Thanks.

I had a wonderful time in Europe, mostly junketing, although I learned a lot and had time to think profitably about scientific problems. Am now all set to go on new lines, principally adaptive physiology of Rhodospirillum rubrum (pigment synthesis) and intracellular structure (hunt for bacterial mitochondria & relation thereof).

All the best to you both,

Roger
