Prof. R.V. Jones

SEP 14 1987

Notes and Records 6/87.

-- Just to say how very much I enjoyed that issue. Your portrait of Lindemann was masterful!

Dramaurgie on Haldane recalled some exciting times — including my visit to him in Calcutta Nov. 1957 (cf. enclosures.)

Hooke's "method" should not be so scorned -- he was a step away from a comprehensive system $\int_{-\infty}^{\infty} f(v)\,dv$ which may be useful on the proper choice of scanning variable.

I congratulate you for many very interesting issues.

Jim.

Permit me to send some enclosures that match thoughts evoked by this reading.

P.S.

I.G. Farben / Frankfurt

I'm just back from a brief trip to Hoechst A.G. (which has just acquired Celanese Corp., for which I consult.)

One of my compatriots remarked that the German chemical industry was not targetted during WW-2 when it would have been an easy shot. So I.G. Farben was unscathed.

Can you point me to any facts on the matter?
