Dear Josh,

I have been doing some light reactivation expts on the K-12 strains. Preliminary expts indicate that W-1, Y-53, Y-10, and 680 behave like our B/r. But K-12 and 58-161 give small photoreactivation and the "g" is not constant. I'd like to try 679 but I seem to have lost it over the summer. Apologies for any remarks I may have made about other people's stocks. May I have another 679?

Many thanks for the handy gratis. Consumer's Union describes and recommends it in its latest issue.

Delbruck wrote saying he would be [illegible]e for our next meeting.

Luria is going to be here this week-end on a vacation.

Nothing else new.

Aaron
