Joshua Lederberg Ph.D.
Stanford University.

Dear Doctor: I wonder if you are aware of two volcanic Islands in Mono Lake - One island is supposed to have wild Goats + is a "Sea Gull" hatching center - its neighbor has all degrees of heated pools - "pot holes" of gases and numerous algae + shrimp.

Red, green + black algae seem to have developed the ability to live in extremely hot water and may be a source of information for habitat in the extreme of outer space -

A lighted paper placed over one of the pot holes, reveals white fumes that seemingly belch forth following the presence of the paper - Perhaps sulpur gas -

There used to be a boat on the lake operated out of Mono - Inn by Mr McPherson - it was destroyed - Kit Carson's daughter's headstone (Prarie Flower) who died in Mono diggings in 1800's during child birth is near bye - marked by a ~~bray~~ bronze plate -

If you are interested you might send some one up to that area with a motor boat. Mrs McPherson is usually at the hotel

Very truly yours
John F. Fahey D.O.
