Professor Joshua Lederberg
Department of Genetics
University of Wisconsin
Madison, Wisconsin

Dear Professor Lederberg:

Please excuse the long interim between sending you the 15 T⁻ culture and writing this note.

Doctor Hershey told me that you would like to investigate the progeny of cells which have incorporated 5-bromouracil into their DNA; and so, to facilitate your investigation, I have sent you E. coli, 15 T⁻, a thymine re-quirey, which was sent to us by Seymour Cohen, and 5-Bromouracil which was secured from Dougherty Chemicals, 87-34, 134th Street, Richmond Hill 18, New York.

Very truly yours,

Elizabeth Burgi
