Jan 25th 1960

Dear Dr Lederberg,

I am spending a few months with Francis Ryan at Columbia and am forgetting Neurospora and chickens & electron microscopy temporarily to do some mutation experiments with E. coli. I would like to produce mutations in protoplasts & wondered if you have any dap double mutants with amino acid or pyrimidine base requirements which you would be prepared to part with. I would be grateful if you would let me have subcultures of them.

I have an opportunity coming up of getting over to the west coast, via the Neurospora Information Conference at La Jolla March 2-4, and wondered if it would be convenient to visit you either just before,

or just after this ~~pri~~ time.

Please give my regards to your wife ~~and~~ to Gus Nossal if he is still with you.

Yours sincerely

Geoffrey Grigg.
