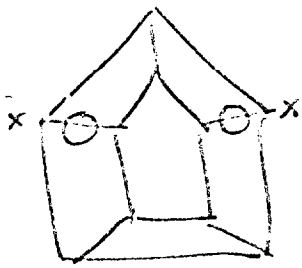
Dr Klee —

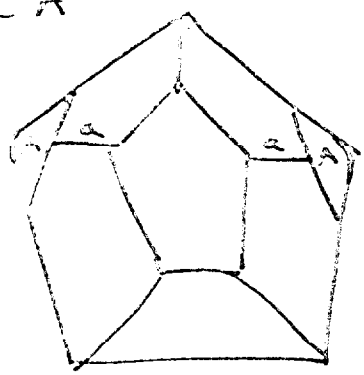
I awake this morning with a "proof" for the second Tutteau figure (which I may have scrambled).

We already know that no H.C. of the pentagonal prism traverses both marked edges (—o—):



KLEE

Now, replace the vertex x by Tutte's 15-vertex graph A



the circuit from which must include a.

Hence this figure has no H.C.
Q.E.D.

) = L
