MICRONUTRIENT ELEMENTS

B & O Train – Washington to Baltimore.
March 5

Dear Josh & Esther,

I am longing to hear from you. The present preprint is for your orientation. It will probably be broken up into two articles since we have much more material now. I have also ready a huge article on all the mutants (or rather types of mutants) including the epimerase-less. I will send it next week I hope. The polysaccharide situation is being checked up & expanded by Dr. Jeanloz, a Swiss carbohydrate chemist at MCH.

Dr Nikaido & Fukasawa (Keio Univ., Tokyo) who are sending me Coli & Salmonella strains in which gal is a lytic agent. They would very much like to have 3096. I can send them a stab culture. However, I want first to have your approval since they are isolated by you folks. Perhaps you would like to send them the strains directly.

I have various more or less crazy exp.'s under planning. How I would love to discuss it with you since you have a wonderful encouraging & stimulating influence on me! In Napoli – will we really get time to talk? I will not believe it before I see it. — I will go to Vancouver in late June. May stop for a day or two in Colorado for another meeting on Human Genetics. Would not

If it were not right on the road to Vancouver
Kindest regards
Sincerely
Hans
