

October 8, 1956

Dear Dr. Walter:

Enclosed are our standard F+ and F- prototroph stocks, respectively. If your concern is to establish a valid correlation of some other response with F status, I suggest you establish new conversions from F- to F+. (Dr. Brooke or Dr. Umberger at the Harvard Medical School may be able to furnish cultures for test and directions on this point.)

I regret the paper requested is out of print.

Yours sincerely,

Joshua Lederberg  
Professor of Genetics
