2/22/57

Dear Joshua & Esther:

While at the Caltech meetings I heard that Calif (at Id.) was getting heterogenotes from Hfr (Hayes) × E crosses. Do you have any info on this? Again people think this may be a characteristic of all K12 crosses. I don't have a copy of Hayes Hfr (W2324?) and would appreciate one if you can send it. It should have the M^- Lp^+ character of possible. The other day I sent A. Campbell W3079 (r'd as M^- Lac Gal, Galy Lp^0 S^R) I don't know whether you want to keep a record of that or not.

Sincerely

Larry Morse
