Env. Health / Urban Coalition

APR 11 1969

Ron Linton — hastily
Comments attached.

I will call you early next week for more relaxed discussion.

General criticism: lack of focus + specificity about the nature of the environmental hazard. Your HEW/'67 report was infinitely better.

Can one assess the general priorities of different insults; cost-benefit analysis? If not, this is the issue for investigation. "We all know" the environment is deteriorating in a general way. But what are the specifics now? This is not brought out very well.

Sincerely

Joshua Lederberg
