Memo from
JOSHUA LEDERBERG

To Kees

00.25.72

I am trying to trace the first credible or insightful experiments on "interdonal influences" in bacteria. Sanfelice 1893 and Smith, Th. 1894 (Trans. am. assoc. Physic. 9:85) who quote him are the earliest I have. Do you have any other suggestions? Do you know of any later worker who would have cited either of these (before 1954)?

Josh.
