DEPARTMENT OF GENETICS

1/19/54

Dear Ed—

am delighted to hear of your approaching visit and trip abroad. We hope you will not be too rushed to have some time to see us.

In re cultures, thanks ever so much for sending them — we are looking forward to their arrival. I forgot to ask for it, but if you have a prototrophic, non-flocculent, α, could we have this too in case the mutants you have are in some way unsuitable and we have to make our own?

UNIVERSITY OF WISCONSIN . . . (Letterhead for interdepartmental use)

(over)

very good!

About a dozen zygotes now isolated. Many of the primary hybrids are definitely single cells with the full genetic complements of the Hfr & F-parents, so the eliminations must occur later. I am looking forward to talking with you about all this.

Yours as ever

Joshua.

Sorry, Josh, we have only the original rough (s) haploid from Lindegren — and some S mutants of undesignated sex from Rearme's asci. Pomper should be able to help — or Lindegren or Roman. Well see you in Madison around Mar. 18? Ed

i.e. S-trypt. S-uracil ad 4 etc. } let me know if you want any of these. Probably some I don't use S?
