MEMO FROM
J. LEDERBERG
GENETICS DEPARTMENT
STANFORD UNIVERSITY
STANFORD, CALIFORNIA

TO: Garfield

TX
RC
RG
A

Dean Alway was quite pleased at your offer of a trial subscription to CC. He suggests starting this about September 1; I am sure you will glean a number of additional subscribers. We will send out a note with the distribution; if you want to add any explanatory or exhortatory information send it along with the shipments.

Please send 30 sets addressed to

Dean Robert Alway
Stanford University The Ship School
Palo Alto - Stanford Medical Center
Palo Alto, California

We will distribute from there

Will bulk shipments (on paid subscription) come pre-addressed - or is this service part of the extra mailing charge for individual addressing? How much would that additional charge be?

NSF may have deflected our play, but I am still thinking what might be done. Let me know if there are any further developments - there should be!

Frankly I don't think that "genetics" is the finest circumscribed field for a triad in C-1. I think "physiology" would be much better. But we need it in all sciences and any move to get started is a good one. If you C-1 just a group of geneticists as a closed group I'm afraid you shouldn't generate much progress. What front people in the field remember from their own experience.
