Josh

(1) Here is a copy of a superb article in the Feb issue of The Sciences (published by the N.Y. Acad of Sciences). On the last page you will note the hook-up of Exxon + MIT + Harvard + Monsanto.

(2) This AM I had a chat with Dr. Bob Fuller who has replaced Dr Bill Haines. He has been in contact with Harvard, Johns Hopkins, NYU Med Sch, Dartmouth etc & he is aware of the contents of the article mentioned above. He was pleased to learn about the combined MD-PhD program at the 3 institutions here, but he stressed that he only limited funds at his disposal. Bob Fuller & I are very close friends & he & I communicate with each other freely.

(3) The reprint from Science (Young + Hakomori) show the importance of IgG3 in cytotoxicity studies - just as IgG molecules are responsible eg. for antibody induced abortion. Am now in the process of preparing 2 papers for publication

(4) Henry Kunkel told me that he will give you the nod to write Henry S Kaplan but thus far he has not made an appt to see you about this and other matters

(5) We are to meet on Monday 10^30 AM on Feb 23.

I hope that you are having relief from your ailing shoulder

Best

Lewis
