11/14/82

ELT ↓

With the exception of Neurospora I (Mar 1941) which dates the inception of Neurospora work (examined by me 11/77) there is not much that can be deciphered from these notebooks. The Drosophila books are mostly extraction/fractionation schemes for pigments; preservers, etc.

I do not know what "toxin" is about.

If copies of a few pages copied out, encl.
