Personal Memo from:
JOSHUA LEDERBERG

G. Attardi
Caltech.

11/10/89

mt-DNA / complementation

Dear Attardi -

Your paper with Kenji in Science 10/27 was of the greatest interest to me.

① My long standing worry about mt-genotoxicity of acridines for human cells

You refer to unpublished work - the first study so far as I know - on such effects on mammalian cells. Would you be kind enough to send me your report when it is published.

② Revival of Lettré 1957. Do you think there can have been any substances to those expts?
I am not aware of any followups

Sincerely,

J
