My dear Dr. Chabrier

I would be most grateful to you for a set of reprints of your work on mycoviruses, particularly bearing on

(1) transmissibility
(2) segregation (?) during protoplast formation and regeneration
(3) "cure" under chemical treatment.

(Is there any example of 3 ?)

You mention (2) at p. 444. (encl.) Do you have any thoughts about mechanism? I think I have seen something similar in partitions of F plasmid.

In a paper just in press at PNAS I have tried to correct bibliography to include Chabrier reference. I hope this is in time.

Sincerely,

Joshua Lederberg
