Dr Joshua Lederberg:
Rockefeller University.

Recently I saw a newspaper article by John Barbour on the "Secret to Life". Your part in discovery of the shape of DNA was mentioned, and you were quoted. It also mentioned a "World Environment Center" at R.U.

Perhaps you will remember me as president of the new Society of Environmental Toxicology and Chemistry (SETAC) when I presented you with our highest award, our "Founders Award" You wondered whether such a society was needed and whether it would succeed. So did I in 1980.

Today we have 3500 members with over a dozen chapters, a SETAC-Europe & a SETAC Pacific Rim and SETAC-SOUTH AMERICA on its way. We have had annual meetings with over 2000 people and over 1,000 papers presented. Our scientific publication Environmental Toxicology and Chemistry established in 1982 now has over 2,000 pages annually. We have Science Fellows in Congress, advisors to EPA, student travel awards and many other awards, and an Education Foundation to finance workshops and many other endeavors.

Thought you might like to see how SETAC turned out. Our multidisciplinary approach is a great success.

Hope you are well and having scientific fun
