Memo/Reply From
JOSHUA LEDERBERG

TO: Dr. Jozsef Molnar

Dear Dr Molnar

JAN - 3 1991

Your works are plasmid ~~[illegible]~~ by phenothiazines have ~~[illegible]~~ me on several counts.

The most recent known to me was in 1980.

Do you know of further inquiry about DNA - binding of phenothiazines? Discussion of mutagenic adversity from use of these drugs?

Do you confirm that methylene blue potentiates the action? What does methylene blue do alone? Adrian Albert ("Selective Toxicity") talked about therapeutic interference but I never understood that.

Sincerely,

Joshua Lederberg
