Dr. Joshua Lederberg
Department of Genetics
University of Wisconsin
Madison 6, Wisconsin

Dear Josh:

Enclosed please find the two acknowledgement copies
of the cultures which you sent.

The cultures are all in fine shape with no exceptions.
We are now finishing up a survey of their inducibility comparing
lactose with alkylgalactosides as inducers of intact cells, proto-
plasts, and shockates. I will send you a summarized table in the
near future. I think you may find the results somewhat amusing.

My best regards both to you and to Esther, and many
thanks for the material.

Sincerely yours,

S. Spiegelman
Professor of Bacteriology
