

March 3, 1948.

Miss Barbara Wright,
Hopkins Marine Station,
Pacific Grove, California.

Dear Miss Wright,

As requested, your name has been put on my mailing list, and current reprints are enclosed.

As far as I know, Dave Bonner is staying at Yale where he will carry on the good fight with N. c. However, most of Tatum's students are probably going to accompany him to Stanford. I have no other news of Dave, and even this is second hand, but probably reliable.

B. Volcani, who was here for a few weeks, mentioned your work to me, but only to the extent of exciting my interest. It had to do with mutagenic action of heat shocks, did it not? I should be interested to hear about the results.

Best regards, from Esther, and to Dr. van Niel and to Wolf.

Sincerely yours,

Joshua Lederberg
Assistant Professor of Genetics.
