Dr. Joshua Lederberg
Department of Genetics
Stanford Medical School
Palo Alto, California

Dear Joshua,

One of my students is going to look into chlorine as a possible mutagen in E. coli --- as far as I know, it has not been tested. This boy is very energetic and competent, and I expect that we should have an answer soon. It is scandalous that so little is known about its biological effects!

Hy mentioned that you may be coming to New York after next week's Washington meeting. If so, it would be very good to see you -- and Marguerite, too, I hope?

With best regards,

Sincerely,

Evelyn M. Witkin
