E coli hemolysin
12/84

Your review in Micr. Rev. reminded me of the use of blood agar in early work on phage λ.

Do you know if the release (?) of hemolysin by phage lysis of * E. coli or S. typhi has been cleared up?

Can you spare a reprint?

Thank you
[illegible]

used to accentuate lytic reaction of Lp+ bacteria on Lp⁵ lawn.

* cf Schiff + Bornstein 1940 J. Immunol 39: 361.
