Personal Memo from
JOSHUA LEDERBERG

Dr Lebaud

DEC 8 1983

FYI

Some years ago, I did some [unpublishable] studies on birth order effects (re I.Q., social status outcome ....). My hunch was that first sons' orientations to their fathers might play an important role. O.D. Duncan - for his books on generational mobility and occupational structure did have some special census samples, run that included some relevant data: I don't know if these are already well-known to you.
