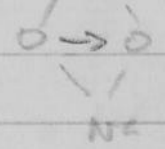
~~cha~~ D.N.A. 14 Dec 5.

chain building

going round anti-clockwise upwards, and going from P to P across the Na diamond, we call the number we go up



the skip.

The order is the number of lines of Na diamonds (going rightwards upwards) which make up the structure.

order 3 : skip +2

even with diamonds squeezed

impossible to join any P, except in the closest direction ie not crossing any Na diamonds ie. a 3 chain model.

[2 chain model topologically possible, but not possible to join]

this model not pretty, but can be joined. For later consideration.

order 3: skip +3

only closest direction (not crossing Na diamonds) possible.
