Dear Joshua,

Do you have the following amino acid requiring mutants of K12 (either lysogenic or non-lysogenic):

methionine -
tryptophane -
proline -
cystine -
lysine -

I would like to use them in some experiments on protein synthesis.

I am afraid that the P32 K12 experiments with Dave Skaar are still incomplete but I hope to find time to finish them soon.

With best regards,

Alan Garen
