CARLSBERG LABORATORIUM
PHYSIOLOGICAL DEPARTMENT
10. GL. CARLSBERGVEJ
COPENHAGEN, VALBY
DENMARK

11th July 1962

Dear Josh and Ester,

I came here from Stockholm and I hope you have received my cards. I left Geneva on the 2nd July. I met Arber and also Dr Weigle with whom I had good useful discussions esp about fractionation. I gave a seminar in Kellenberger's lab. He was not there but all the other workers were present. Arber is going to Berkeley this winter to give a course. Larry Morse is planning to spend 1 year with Arber.

From there I went to Helsinki. I have to cut my trip to Paris for several reasons. (one being the fast disappearance of the cheeks!) I met Helen and Ole and also gave a seminar in their department. I came to Stockholm two days back. Visited the Genetiska institutions and had useful discussions with Gustafsson. I spent most of my time in the organic chemistry dept. (Ehrenberg's). They are all working on the indirect effects of radiation - discharge of free radicals and their measurement by E.S.R. - The tool has been only wheat.

I came to Carlsberg yesterday. I shall meet few friends here, before going to Cambridge ~~then~~ I shall also see Orskovs. I have been going thro the thesis and also trying to get literature on the electrophoretic separation. There is a paper by Japanese workers in Arch. Biochem. about the separation of denatured & native DNA. We can explore more on this aspect using Transf. DNA esp Hist. markers. At Carlsberg they have few proteolytic enzymes from Subtilis and I shall get some of them. Possibly we may try some on the competency problem.

I got a nice letter from Marmur. I shall see him and Doty in Boston. I hope to get many things clarified esp with Marmur. ~~Walter~~ Ann wrote to me about some success in the fractionation of DNA, by Gene & Mandel. How far this has progressed. Have they ~~be~~ good fractionation?

GANESAN

Since I had enough travel now I am really looking forward to be back in the lab - It was very nice to see my parents and I am really pleased about the visit.

~~My~~ I have sent some silk pieces by sea mail It might take anywhere 6-8 weeks to reach San F However the ~~ex~~ best pieces I am carrying with me

Hope to see you all soon

With kind regards

as ever

Gan
