Dr Joseph Lederberg.
Dept of Genetics,
University of Wisconsin

Dear Professor Lederberg,

I enclose reprint of the work on mustard gas mutation. I have as yet no further publication although a paper on the behaviour of such mutants (including methods for treatment of spores in liquid phase) has been accepted by Biochem et Biophysica Acta. I expect this to be published soon. I have also made for my own use a critical study of possible methods for isolation of mutants. This includes experimental techniques I have been unable to test as it would mean abandoning the main line of work – the biochemistry of sulphur compounds in moulds. I shall be glad however to cooperate

if you have any question on which you think I might be able to help.

Yours faithfully

J. Hockenhull.
