Dear E+J,

I forgot how much r was to get. I gave it 200,000 r. Irradiation was at 1000 r/min at 250 kv

My visit was extremely pleasant. Many thanks again.

If you want more samples X-rayed, send them down or better still come yourselves

Regards

Aaron

Dear Josh,

No doubt this is either silly or you have done it. ~~If you~~ Take FA from two donors — one donor exhibiting an antigen the other not, the donors being "alike in all other respects". If you treat the two FA preps ~~to the~~ with antiserum for this antigen, will you inactivate the transfusing power of the FA?

Aaron

P.S. Trust you received X-ray & sample
