CARNEGIE INSTITUTION OF WASHINGTON
DEPARTMENT OF GENETICS
COLD SPRING HARBOR, LONG ISLAND, N. Y.

Dear Jack —

Here are the reprints. I'm sorry if I forgot to give you one last summer.

I did indeed see your note in Nature. Have you learned anything more about it? Dr. Newcombe in our laboratory has found evidence for recombination and segregation in Coli — at least, it's the most likely explanation for his results. His data bears more directly on segregation than on the recombination themselves. If you're in N.Y. one of these days, you ought to come out here & see his stuff.

Thanks for sending me your Neurospora reprint. (or was it Ryan who sent it?)

With best regards —

Evelyn

P.S. - As of last week, you can call me "Doc". Isn't it about time?
