RC
RO

SEP 4 1959 Palo Alto,

Thanks, Thel.

Can you make ~~it~~ it (Westex-4) on September 26. This date was chosen after consulting our more outlying members. We will meet at the new medical center here: more later.

The Space Science Board is publishing an extensive volume on Science in Space. Can you anticipate any objections to reproducing the report of your Bioastronautics panel in toto (with acknowledgment of course) as an item in this compendium? Together with some of Carl Sagan's and other material it would help to support a briefer and more general statement on "exo"biological policy.

Yours
John.
