2/18/54

Dear Joshua - Will you be kind enough to send two reprints of your paper with Stocker and Zinder (J. gen. Microbiol, 1953, 9, 410)? The extra reprint is for Miss Davis. We are hoping to start a little work in transduction to investigate the homology of phages.

I've been unable to get back to those interesting forms of yours which contained 2 phage 1 components. I don't understand their peculiar activity as regards phage variation. I've been so snowed under that I haven't even thought of them lately.

I hope that Bill and I will get to Pittsburgh and hope to see you there. Bailey isn't going. I'll give you all the news at that time.

Kindest regards to you + Esther

As ever
Phil
