Dear Joshua: But by bit I am catching up on The Literature. Yesterday I ran across a picture of you in the Chicago Tribune of the A.C.S. under date 12-22 - which I had not seen before. You look pleased and happy in that starched shirt + white tie. [Very becoming indeed] Question - trivial to be sure - but you should know. I do not recognize the Lady labelled as MRS Tatum - yet she is so labelled in

several pictures — one displayed in Madison. Mrs Tatum appears as a deep. sultry-brunnette with what we old horse-men call a Roman-Nose. Does the Nobel Committee supply a mistress — along with the award? Would you — or Esther kindly help poor Link out — or is the modern hair-do system etc capable of completely transforming women these days. ——

No news from here except the

Good solid winter - my kind!!
And to think that K.P.L.
has to be cooped up in such
fine and stimulating weather
One of the best winters of my
life was 1950-1951 when I
worked out the bartneg
practices for warfarinized
parts which are non standard
practice. I had a rat-route
and according to my log-
book from November 12 1950
till March 18-1951 K.P.L
never missed a day of
taking records in the field. One
A M at 7:00 just south of

Black Earth - it was -28° at 7⁰⁰ AM. and K.P.L. + his dog Alex were there.

What do you know about the Physics Dept at Stanford especially theoretical Physics. Our eldest son John who will graduate from Antioch College in June has Stanford on his list if he's successful on his fellowship applications - (Theoretical Physics). I of course am not to determine his career - but I hinted that over

Physics U.S.A. 1959 - 2000 AD
is like a bird in a cage
free
and that if he wished to retain
his moral and intellectual
integrity a field not
dominated or determined
by the A.E.C. would offer
a freer climate. In fact
I agreed with Einstein's
statement - "that he would
take up a trade like
plumbing" - "in preference
to being one of Lewis Strauss's
children". - So long
split the most recent particle from the
Gene - again & again - finally

Regards as usual etc
K.V.L.

Non well and not with D(+) Glucose.
