Dear Prof. Lederberg,

MAR 7 1967

I'm enclosing a copy of a bibliography on graph theory which I recently compiled. If you ever get involved again in work related to graph theory, it may be of some help.

TURNER

I'm also enclosing a copy of a review that appeared. It settles in the negative a question you once asked about trivalent planar five-connected graphs. They <u>don't</u> necessarily have Hamilton circuits.

Incidentally, I have essentially completed my Ph.D. requirements in math at Stanford. I'm working full time at SRI. Most of the work is in the area of graph

theory and combinatorial mathematics, an interest that was first stimulated by my contact with you and for which I express my appreciation.

Best regards,

Jim Turner
