Memo from
JOSHUA LEDERBERG

To: R Young

The most interesting works on philosophy – inference in biology – in recent years are:

Michael Ruse (Guelph, Ont.) "Phil. of Biology". Hutchinson (London)

Smart, JJC (Adelaide) "Phil. + Scientific realism". Routledge + Kegan Paul – see attach.; criticized by Ruse

Goudge, "Ascent of life"
An excellent non-technical analysis of inference about evolution

Do you know Ghiselin, M. (Berkely) – "Triumph of the Darwinian Method" U. Cal 1969.
