Dec 11

Dear Jack:

Y132 is slow to grow (60 hours or more).

Y141, 142, 143 are being rechecked - and ~~141, 143~~ 134, 137 will be sent. Also a few mgs. citrulline

Have made 3 runs $C_1$ with tris-mustard - small colonies, but no stable mutants! Incidentally, did you take all the ribo & desoxyribo nucleases? as well as isocitrate & ketoglutaric?

Recombination of acetylvaline resistant is proceeding OK. More later in letter due you - when I can find time. Regards to Esther - yours Ed
