osaka 4th/May/1962

Dear Tom and Ester,

I arrived here yesterday and Hirota was waiting at the airport. Hope you got the note. It was such a rush of time I just made the train. The bus was ~~going~~ stopping because of "up priority". The fellow at Pan-am issued me the ticket right away (in less than 3 minutes) to osaka. I was surprised and this morning found out that it costed me $30 bucks etc. ~~Because~~ As he informed me that flights and seats are available from here ~~to~~ Honkkong I believed him and this morning found that seats are not available till the 14th to Honkong. ~~If~~ So I have ~~to~~ only one choice. ~~to~~ to pay back to Tokyo and go to Honkkong, which means that the extra trip to osaka ~~to~~ Tokyo to be met by me. That is ok. ~~to~~ This extra fare changes completely their accounts so they calculated the fare and found that Pan Am at SFO charged me $200 etc. So they have to clarify this mess by cable. Result is they are planning to issue me the whole tickets (a bunch of them) new with a newly calculated rately. They asked me to wait for 3 hrs. I told them my only wish is "to get out of here as early as possible" since the Travellers checks are fast "evaporating".

Gunnam

Amist of this mess I went to Kyoto and saw the temples, which reminded me of the gothic cathedrals or palaces around Delhi — If you see one you have seen them all! Still it was nice to see Hirota. and Mount Fuji from the air and it is worth $30.

Since my handwriting is small and the Results section in the M.S ~~I~~ have been written in pencil, I am writing them in ink. ~~and~~ I shall drop it in Tokyo to your address. If ~~you~~

you can go through it and at least ~~g~~ give me a ~~[illegible]~~ hint on what to stress in the discussion, I shall ~~do~~ rewrite them and send you the M.S. to Palo alto. Kindly send it to my New Delhi address

It was nice to see you both and thanks a lot for everything. Regards.

Yours

Gan

I informed Hirota about the Pronase experiment with mating system.

Gan

Going through my blending and melting Data, hiscurely I found His_2 giving a higher M.p. In these experiments & there were no ~~reversions~~ reversions either. Do you think it might be a translocation of His, type ~~of~~ regions amidst the Aromite group? Since I have left this ~~[illegible]~~ DNA in the cold room, I am writing to Hanko to check this once more.

Gan

Josh: YOU ARE RIGHT: ~~P~~ABOUT PAN-AM
