Memo/Reply From
JOSHUA LEDERBERG

TO: Bart Childs

OCT - 2 1985

Dear Bart -

Some people did read Garrod.
(Bob Kohler reminded me of your 1970 paper.)

Garrod's work on alcaptonuria is quoted as an example of blocked metabolism by Bodansky, "Introduction to Physiological Chemistry", 3d ed. 1934. (I read it in 1938 [sic]).

Contra Beadle's statement, Tatum made detailed reference to it in a course he gave at Stanford in Winter 1941, just before they started Neurospora expts.

(Bart,) when did Haldane, Scott-Moncrieff, S. Wright first refer to Garrod? The latter certainly < 1941.

all best wishes,

Joshua Lederberg
