Personal Memo from
JOSHUA LEDERBERG

Prof Childs

FEB 24 1986

Carrol → Beadle + Tatum

Thank you, Barbara! Your letter is as judicious and critical as could be. And I agree with all you say about Carrol.

Don't pass Tyrland by so quickly.

Whether genes are proteins or DNA is a different issue. And "enzyme" has to be taken not too strictly.

Beadle himself talked of genes having both auto- and hetero-catalytic functions.

Did I send this very early paper by Haldane?

J.
