Dr. B Childs

FEB 26 1986

re Graham ... on hemophilia

Dear Bart –

Your letter led me to recheck my first textbook – Bodansky.

There were substantive as well as conceptual problems in the way of understanding hemophilia as a genetic deficiency disease.

But it is hard for me to believe this wasn't cleared up in the 40's.

Have you seen any history of the id. of the clotting factor proteins?

J

* For Bodansky to quote this without comment indicates how unsophisticated his grasp of genetics was!
