Personal memo from
JOSHUA LEDERBERG

Ed Johnson

MAY - 4 1988

Using asbestos for transfection.

If the process is so efficient (and you might enhance that further) you might want to consider applying for a patent, as it may have commercial value.

I have 1 reviewer lined up, not on the trail of the 2d.

Sincerely,

Joshua Lederberg

P.S. How do you relate the synergy with sonicking? Ciliary inhibition and deeper ingress of the fibers? (Can that be verified directly?)

J
