Personal memo from
JOSHUA LEDERBERG

Peter / Marjorie Model.

AUG 31 1990

PS.

Genetic Expts on Chaperone for Protein Folding.

Gatenby - the paper you pointed out to me - has laid the groundwork.

Scan his ~~supp~~ Groe-suppressible mutants for those with a readily assayed protein product and do that experiment in an invitro expression system!

Has RuBISCO assembly been studied invitro?

The Nature paper discussion points to quaternary structures as the target - not folding on a simple monomer - but this would be a good start.

Have you seen any later publications on GroE suppression?

Jim.
